

C50L[®]

Huck-Engineered Lockbolts
for the Most Challenging
Applications

Huck® C50L®

The Fastener That Has Defined HuckBolts for More Than 50 years

The C50L® offers superior vibration resistance and overall durability for heavy-duty fastening jobs, and is ideal for use within applications where consistent, uniform high clamp force is required. Testing has proven that C50L fasteners meet, or exceed the performance of torqued bolts in both shear and tensile strength, as well as fatigue life. For heavy-duty applications ranging from railcar to mining equipment manufacturing, the C50L delivers superior vibration resistance and overall durability.

Available Sizes 1/2", 5/8", 3/4", 7/8", 1", 1-1/8", 1-3/8"

Materials Steel, Aluminum

Headstyles Round, Truss, Large Truss, 90° Flush, Thread Head

- ✓ Superior vibration resistance
- ✓ Overall durability for heavy-duty applications
- ✓ High shear and tensile strength

- ✓ High fatigue life
- ✓ Consistent, uniform clamp force

Unlike threaded fasteners, the C50L HuckBolt delivers consistent installation results. High costs of calibrating, maintaining, and replacing tools are eliminated. Also, installation does not require expensive, highly experienced workers.

Secure, Fast Installation

- 1 Swaged-on collar forms a permanent, vibration-proof connection.
- 2 Initial long length of fastener enables pull-out of large gaps.
- 3 Consistent, repeatable pre-load.

- 1 Insert pin into the prepared hole and the smooth bore collar is placed on the pin.

- 2 The installation tool is applied to the pintail. When the tool is activated, the jaws in the nose assembly pull on the pintail and the nose anvil pushes on the collar to remove any gap.

- 3 The nose anvil starts to swage the collar into the lockgrooves on the pin. Continued swaging causes the collar to lengthen and develop clamp.

- 4 When swaging of the collar into the lockgrooves is complete, the tool ejects the fastener and releases the puller to complete the sequence.

*All grips are calculated using a LC collar

Standard-LC
LC-2RFlanged-3LC¹Low Profile-8LC²

AC-R44

¹ When using a 3LC collar the minimum grip is equal to the Min grip using a LC collar - "nominal J", Maximum grip is equal to the Max grip using the LC collar - "nominal J" ("J" represents the flange thickness of the 3LC)

² When using an 8LC collar - Min grip is equal to LC Min Grip (See Table), Max Grip is equal to Min grip + grip range + "L" ("L" is the difference in height between the 8LC and LC collars.)
